REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art of record do not fairly teach in permissible combination the claimed invention. Newly submitted claim 14 requires:

the outer circumferential flange of at least one of said pressure-tight side walls being bolt-connected between the outer housings of two adjacent modules and thereby forming a seal packing between the two respective outer housings in an assembled configuration of the gas turbine, and an exterior portion of said seal packing remains visible exteriorly of the assembled gas turbine thereby accommodating visual confirmation of the seal packing's orientation between the outer housings in the assembled configuration of the gas turbine.

Previously applied Chan et al (5,127,606), Fig. 2 has a side wall 76 designated as a shear plate. Chan et al does not teach the shear plate extends completely around and thus it fails to perform as a pressure-tight side wall. Note that the pressure-tight side wall must be more than impermeable but also provide sealing of the modules. Furthermore, there must be a plurality of pressure tight-side walls as each of the modules has a pressure tight-side wall (see 2nd full paragraph of claim 14). Smith (3,823,553) teaches various side walls but does not teach they have the visible seal packing between the modules. Ebel (6,131,384) also teaches side walls 8a but does not have a visible seal packing nor is it pressure tight as it has holes 13a.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
